

FLOOD SURVIVAL GUIDE

Life-Saving Emergency Preparedness Handbook for Nepal

By Pratik Chaudhary (IOE Pulchowk Engineer, DigitItUp Agency CEO)

1. The 72-Hour Emergency Go-Bag

Every household in flood-prone areas must keep a waterproof backpack ready at an elevated location containing: (1) 3 Litres of clean water per person per day; (2) High-calorie non-perishable food (beaten rice/chiura, dry fruits, energy bars); (3) Waterproof LED torch with extra batteries; (4) Portable power bank and AM/FM radio; (5) First aid kit with ORS (Jeevan Jal) and water purification tablets; (6) Waterproof pouch for citizenship cards, land deeds, and emergency cash.

2. Water Purification During Deluges

Flood water contains sewage, industrial runoff, and pathogens. Never drink flood water without treatment. Minimum safety standard: Boil vigorously for at least 3 minutes, or use Chlorine/Aquatabs tablets (1 tablet per 4-5 litres of clear water; let stand for 30 minutes before consuming).

3. Evacuation & Electrical Safety

Before water enters your home: Turn off the main electrical breaker immediately to prevent electrocution. Disconnect LPG gas cylinders. Never walk or drive through moving flood water—just 15 cm (6 inches) of rushing water can knock down an adult, and 30 cm can float a car. Move immediately to verified high ground or designated emergency shelters.

4. Nepal Emergency Hotline Directory

- Nepal Police Emergency: 100
- Armed Police Force (Disaster Rescue): 1114
- Fire Service / Ambulance: 101 / 102
- DHM Flood Forecast Toll-Free: 1155
- Pratik Chaudhary Academy WhatsApp Desk: +977 9812414094
